

Solution Requirements

Date	28 June 2026
Team ID	-
Project Name	Smart Lender
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:

Create a comprehensive list of requirements to define exactly what your solution will do and how well it will perform.

- **Functional Requirements (FR)** define specific behaviors, functions, or features of the system (What the system should *do*).
- **Non-Functional Requirements (NFR)** specify the criteria that judge the operation of a system, rather than specific behaviors (How the system should *be*).

Fill out the descriptions and necessary details for each category provided below.

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
1	Authentication	<i>Users can access the application through the web interface without login.</i>	Medium
2	Authorization levels	<i>Only administrators can modify datasets and retrain models.</i>	Medium

3	External interfaces	Uses CSV dataset, Flask framework, and Pickle model file.	High
4	Transactions processing	Accepts applicant details and predicts loan approval instantly.	High
5	Reporting	Displays prediction results and model performance metrics.	High
6	Business rules, etc.	Loan approval is predicted based on applicant information using ML algorithms.	High
7	Compliance to laws or regulations	Applicant information is processed securely without storing personal data.	Medium
8	<i>Other</i>	Supports real-time prediction using the trained model.	Medium

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
1	Performance & Speed	Prediction should complete quickly.	Response time < 2 seconds
2	Scalability	System should support more users and larger datasets.	1000+ predictions/day
3	Security & Data Privacy	User input should remain confidential.	Secure local processing
4	Reliability & Availability	Flask application should run without failures.	99% availability
5	Usability & Accessibility	Easy-to-use interface for all users.	User-friendly UI
6	<i>Other</i>	Code should be modular and easy to update.	Well-structured project
